TRAINING : Adaptation to climate risk

The objective of the training for the company : Audit the climate risks linked to the company's activity and train employees and managers in these risks considering the levels of exposure.

- Analyze risks and adapt: emergency measures and operational adaptation
- Set up simulation workshops

The deliverable is composed of a list with action tips according to the field of activity.

The training is tailor-made by professionals in the field and adaptable according to the company's activity and challenges.

Vision and anticipation are the keywords.

Extreme weather events are increasing in frequency and intensity worldwide; companies' strategic and anticipatory vision to advance these events is imperative to ensure that they can absorb these shocks.

Formation's goal :

- Acquire in-depth knowledge of the physical, structural, operational and strategic risks related to the climate risk of your activity;
- Build your risk anticipation roadmap;
- Train senior managers and operational teams on these risks to reduce their impact;
- Know the challenges faced by companies in the face of climate change and be able to ask yourself the right questions to initiate a transformative approach within your organization.

This training is for you if:

- You wish to take action in your organization in the face of climate change.
- You want to know the impact of climate change on your organization's activity.
- You want to initiate an emissions reduction plan for your organization by
- You want to identify the physical risks to which your organization may be exposed in the face of climate change.
- You wonder if green growth is possible, given the physical constraints.
